
(a) dq currents, effective inductance ×0.6 at t = 0
i_d
i_q
i_d^*
i_q^*
dq current (A)
time from shift onset (ms)
(b) prediction error and conformal radii (one seed)
one-step error norm (A)
score s_k
static envelope
ACI envelope
time from shift onset (ms)
(c) coverage, mean of 30 seeds
coverage (50 ms window)
static split
rolling window
ACI
time from shift onset (ms)
(d) marginal vs conditional coverage
all steps
voltage-transient steps
coverage before shift
plain
ensemble-std normalized
voltage-step normalized
